SUBMERSIBLE
SLURRY PUMPS

Submersible High Power Slurry Pumps GPN

The GPN-series is a submersible high power, heavy-duty slurry pump incorporating an agitator to suspend solids enabling the pump to handle high concentration slurries. Being equipped with high-chromium cast iron wear parts, the pump delivers outstanding durability. The suction plate is adjustable enabling the pump to maintain the original performance*. The GPN utilizes a cooling water jacket to allow the pump to operate at low water levels for extended period of time without the fear of overheating.

*Available in GPN422/622/837

Applications

- Transferring and draining slurry in piling works.
- Draining cement slurry or sand-carrying water in foundation works.
- Draining aggregate and ore wash water in mines and quarries.
- Collecting sediments in grit chambers at wastewater treatment plants.
- Pumping scale at steel mills.

High-powered slurry pumps that deliver powerful agitation for discharging slurries laden with silt, earth, sand or other particulate

The GPN-series is a submersible three-phase high power and extra heavy-duty slurry pump driven by a 4-pole or 6-pole motor. It is equipped with a high-chromium cast iron agitator that assists smooth suction of the settled matters. The other wear parts such as the impeller and the suction plate are also made of high-chromium cast iron for extra durability. The side discharge, spiral design allows smoother passage of the sucked solid matters. The motor is cooled by a water jacket that assures efficient motor cooling even when it operates with its motor exposed to air.

Performance Curves

It is not recommended to operate the unit continuously along the dashed curve.

Discharge Bore mm	Model	Motor Output kW	Phase	Starting Method	Solids Passage mm	Dimensions L x W x H mm	Dry Weight* ² kg	Cable Length m
80	GPN35.5	5.5	Three	D.O.L.* ¹	30	487 x 390 x 841	160	8
100	GPN411	11		D.O.L.* ¹	30	617 x 452 x 924	239	8
100	GPN415	15		D.O.L.* ¹	30	617 x 452 x 924	242	10
100	GPN422	22		D.O.L.* ¹	30	725 x 572 x 1158	430	10
150	GPN622	22		D.O.L.* ¹	30	725 x 572 x 1158	435	10

Side Discharge Design with Water Jacket

The side discharge, spiral design allows smoother passage of the sucked solid matters. The motor is cooled by a water jacket assuring efficient motor cooling even when the pump operates with its motor exposed to air.

1Anti-wicking Cable Entry

Prevents water incursion due to capillary wicking should the power cable be damaged or the end submerged.

2Motor Protector

Circle Thermal Protector (15kW and below)

Directly cuts the motor circuit if excessive heat builds up or overcurrent occurs in the motor.

Miniature Thermal Protectors (22kW and above)

React to excessive heat caused by dry-running. The bimetal strip opens to cause the control panel to shut the power supply.

3Chromium Molybdenum Shaft

Made of SCM435 (JIS), chromium molybdenum steel (tensile strength 930 N/mm² and over). It has the superior performance against a shock given at the instant of sucking hard solid matters.

4Dual Inside Mechanical Seals with Silicon Carbide Faces

Isolated in the oil chamber where a clean, non-corrosive and abrasion-free lubricating environment is maintained. Compared with the water-cooled outside mechanical seal, it reduces the risk of failure caused by dry-heating and adhering matter. The silicon carbide provides 5 times higher corrosion, wear and heat resistance than the tungsten carbide. Rubber parts of the upper and lower fixing rings are made of NBR or FPM (FKM), which provides higher resistance to heat and chemicals.

5Oil Lifter

Provides lubrication and cooling of the seal faces down to 1/3 of normal oil level, thus maintaining a stable shaft sealing effect and prolonging seal life longer. The Oil Lifter is Tsurumi original design.

6Oil Seal

Used as a “Dust Seal,” it protects the mechanical seal from abrasive particles.

7High-chromium Cast Iron Impeller & Suction Plate

Made of high-chromium cast iron ensuring highest durability. Even if the performance drops due to wearing out of the impeller and/or suction plate, it can be improved by simply replacing the suction plate.

*GPN422/622/837 have an adjustable suction plate.

8Agitating Mechanism

Consists of a shaft-mounted agitator and a dedicated strainer. The agitator made of high-chromium cast iron resists wear caused by abrasive particles, and it suspends solids to assist in pumping sediments in combination with the strainer.

Specifications

			GPN					
			GPN35.5	GPN411	GPN415	GPN422	GPN622	GPN837
